Application area:
 Decentralized pre-processing and output of analog signals

This device controls a connected actuator or any other unit that has an analog input (4 ... 20 mA).
 The device has two analog current inputs.

Use as an IO-Link device:

The device has an IO-Link communication interface that requires an IO-Link-capable module (IO-Link master) for interoperation.
 The IO-Link interface allows direct access to the process and diagnostic data and enables setting of the device parameters during operation.
